Notes from Internet Publisher: Donald L. Potter

March 18, 2013

This order of lessons was first used by Mr. Potter during the 1999 – 2000 school year with a class of second-grade bilingual Spanish speaking students at the Murry Fly Elementary School in Odessa, TX. Later that year, Mr. Potter taught the course to a group of English speaking fourth graders, with assistance from his experienced second graders. The results were very satisfactory.

Years of teaching Mr. Blumenfeld's excellent, but bare-bones cursive program, indicates that more information on connecting strokes would be very beneficial. Mr. Potter has taken Mr. Blumenfeld's excellent sequence for teaching cursive and expanded it to make the program even more effective and easier to teach. The lessons follow the beginning phonics lessons in Mr. *Blumenfeld's Alpha-Phonics* reading program.

It is expected that the handwriting practice will continue as the students write all the words and sentences in Mr. Blumenfeld's reading program. This makes the program a comprehensive beginning reading, cursive handwriting, and spelling program, a multi-sensory learning system. The goal is what Mr. Raymond Laurita aptly call **Total Linguistic Function** in speaking, reading, writing, and spelling.

This method of coupling cursive handwriting with reading and spelling instruction has proven a great help for student with ADHD and dyslexia.

Mr. Potter is preparing an instructional video that he plans to publish on his Samuel L. Blumenfeld Reading Clinic page on his website. Teacher and parents will find the video very helpful. The videos will be complete enough that a student will be able to teach themselves to write fluent cursive from the videos.

The *a*, *c*, *d*, *g*, and *q* can begin from the baseline with an under-curve or an over-curve, or in an abbreviated format as I generally teach it, with a down-curve from the midline. Mr. Blumenfeld taught these letters with a down-curve from the midline. I generally used the down-curve because I am helping student at my school learn the A Beka letter forms. While most programs start the aforementioned letters with an under-curve, I prefer an over-curve for starting the letters from the baseline because it seems to me to be a more fluent stroke. I prefer NOT to put a loop on the *o*, but allow student to decide which they prefer. The *p*, like the *g* and *q*, uses a loop below the base-line. When I was a student, learned to retrace the line, instead of using the loop. I now use and teach the looped form, but either is acceptable. (Programs that make the loop on the lowercase *o* go to the baseline are doing the students a disservice. The *a* not the *o* reaches the baseline!). The letter *y* can begin with either an overcurve or an undercurve. I generally use the undercurve since that is how I was taught in 1953, and the A Beka cursive program begins *y* with the undercurve. Either form is acceptable.

Following this typed outline are two handwritten documents illustrating the strokes for letter formation.
